LYNK Overview

The LYNK Telemeter is an all-in-one, best-in-class vending telemeter & cashless device.

The LYNK supports tap, insert, tap, and swipe credit card payments, as well as USConnect and CAConnect loyalty program account purchases and balance reloads. Furthermore, the LYNK is **fully PCI compliant** and is compatible with mobile payments like Apple Pay.

The LYNK features 4G/LTE connectivity, with band 12 and 13 coverage for superior connection. Installing a LYNK is quick and easy with automatic registration, self-test, and system alert functionalities. With support for English, Spanish, and French, plus the option to set primary and secondary languages, the LYNK has wide accessibility.

LYNK Full Size and LYNK Overlay

The LYNK Telemeter comes in two form factors: **Full Size** (LYNK-F) and **Overlay** (LYNK-B). The Full Size LYNK is the fullscreen, standalone version that fits standard cutout slots in most machines. The Overlay LYNK, on the other hand, is designed to fit in front of an existing bill validator. Besides slight differences in cabling and UI arrangements, the two models are nearly identical and have the same technical capabilities.

Specifications:

LYNK Full Size:

- Fullscreen / Standalone version
- Fits in standard cutout of most machines
- 320x480px Color LCD touchscreen

Full Size

LYNK Overlay:

- Compatible with *MEI*, *CPI*, and *Coinco* bill validators
- Mounted *in front* of bill validator
- 320x240 Color LCD touchscreen
- Comes with 66mm, 72mm bill inserts for USA & Canada

Overlay

GlobalConnect's Platform

The LYNK Telemeter sends *DEX* information to your VMS every 4 hours. Supported VMS types include, but are not limited to, Cantaloupe Seed, Vendsys, and Crane VendMAX.

The LYNK Telemeter also supports two-tier pricing, with a default value of \$0.15. This value is adjustable on a device-by-device basis to suit individual needs. Also, thanks to the LYNK's Over the Air Update feature, future enhancements and bug fixes can be easily performed remotely.

Additionally, the LYNK Telemeter comes with access to the GlobalConnect Telemetry Server (GCTS) portal, that allows for comprehensive management of your devices and their transactions, including:

- Remote commands (reboot, send Remote DEX)
- Device Status Data
- Dex Information
- Sales Transaction data.

Further simplifying monitoring, the LYNK is also equipped with system alerts containing detailed, real-time information about terminal installations, including self-check results and the machine/asset to which a LYNK is attached.

For recovery purposes, the LYNK supports Reflashing via USB, a feature allowing for emergency backup or quick flashing of field installs. For more information on the reflashing process, please visit the technical support site at <https://www.globalconnectservices.com/technical-support>.

Finally, the *USConnectMe* and *CACConnectMe* mobile apps provide a convenient way to purchase and save using your loyalty account. This feature is fully integrated and enables a seamless and convenient purchase experience.

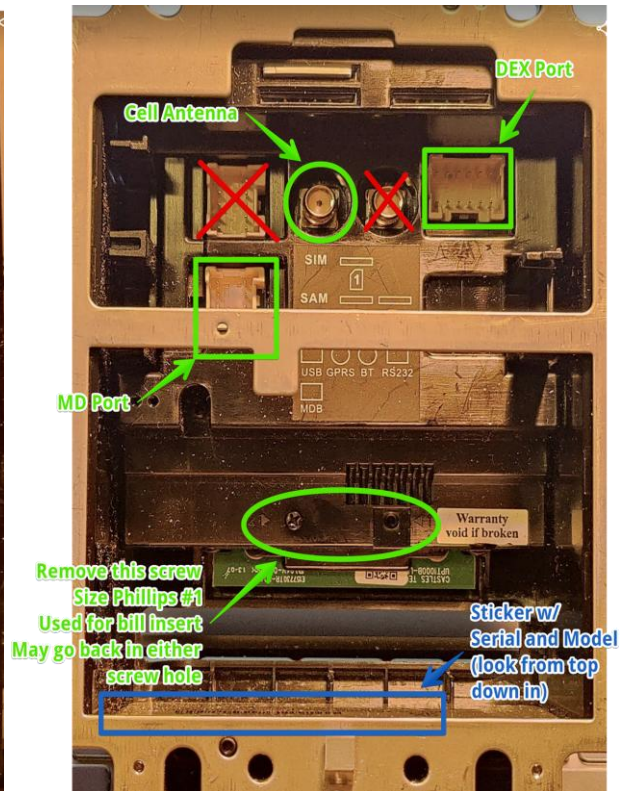

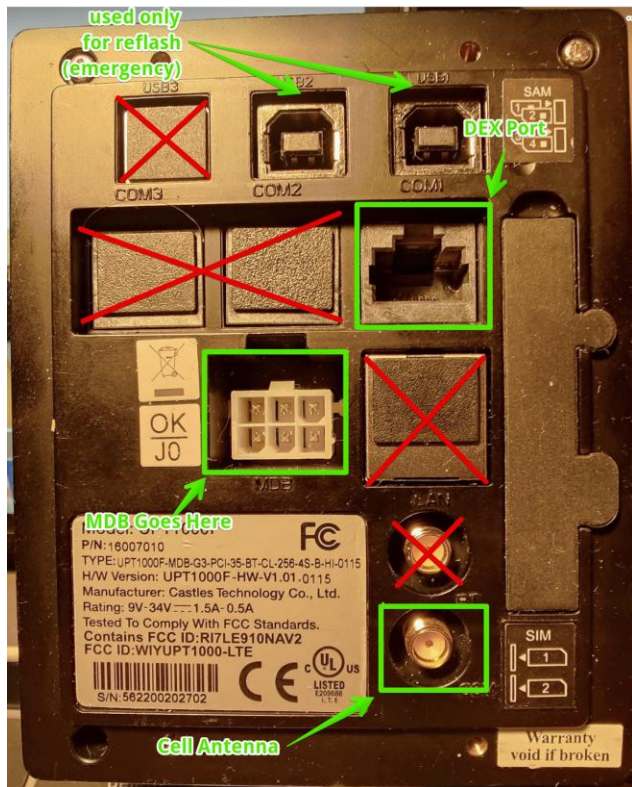

LYNK Telemeter Box Contents

In each LYNK box you will find:

- LYNK Telemeter
- MDB Harness
- DEX Cable
- Antenna
- Bill Acceptor Inserts
- NPC-4 Cable (only for old I/O board LYNK devices)

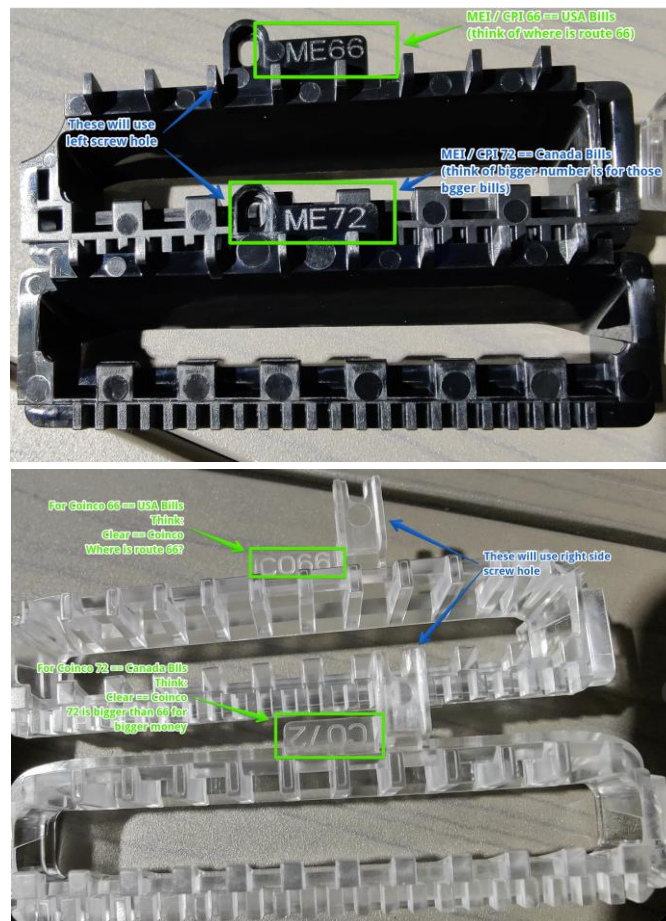

LYNK Connections Diagrams

Choosing the Correct Bill Insert

The **Overlay** model of the LYNK Telemeter can be placed directly in front of an existing bill validator, using the included bill inserts. Be sure to use the correct bill insert type according to your specific bill validator.

For *MEI* and *CPI* bill validators, use the bill insert labeled **ME**. For *Coinco* bill validators, use the bill insert labeled **CO**. Use the **66mm size for USA bills** and the **72mm size for Canada bills**.

For a detailed overview of the LYNK Overlay, please see the video [here](#), as well as the process of mounting the LYNK onto a bill validator [here](#).

GlobalConnect's Platform
